DSM opens new animal nutrition center to support Chinese livestock production industry

DSM has announced the opening of its China Animal Nutrition Center in the Chinese town of Bazhou, south of Beijing. With its focus on swine and poultry nutrition and the capabilities to conduct world-class scientific and application research, the facility will support the development of tailored solutions to meet the needs of the fast growing poultry and swine markets in China.

China accounts for more than 50% of the globe's total swine production. The country's animal nutrition market is fast expanding as livestock production matures and becomes more industrialized. With a special focus on enzymes, eubiotics and vitamins, the new research facility will support ongoing market development by enabling the application of DSM products to address the needs of local swine and poultry producers, further enhancing customer relations in the region. It will also produce scientific data to support product and application development for use in global markets.

Consisting of a cutting-edge laboratory, office building and modern experimental swine and poultry houses, the center will enable DSM to conduct trials on Chinese livestock and develop innovative solutions using proprietary technologies. It will also offer space for scientific and technical meetings, as well as customer training and events.

Dr. Nathan Bird, vice president of DSM Nutritional Products China explains: *"The China Animal Nutrition Center is one of the first privately-owned research and application centers in China and reinforces our leading position in the animal nutrition market both in the country and further afield. With this center, we can now provide a complete service offering to our Chinese customers, with production, marketing and innovation capabilities. Our investment in the state-of the art facility clearly demonstrates our commitment to China as an important growth area with exciting market developments in the animal nutrition sector."*

Dr. Georg Kau, vice president of DSM Nutritional Products R&D comments: *"The new facility is an important step forward in our strategy to provide specialized product development capabilities tailored for local requirements to customers across the world. Complementary to our existing research center in Europe, the new site allows us to perform feeding trials with higher number of animals. Not only will it support the application of our products to the Chinese market, it will also play an important role in supporting our wider global innovation projects."*

Developed to operate according to international standards, the facility has been designed to achieve an optimal balance between increased market demand and the need to minimize environmental impact.
